2. Citations and explanations (Rule 70.7)

Documents cited in the International Search Report:

D1: GB, A, 2246555

D2: US, A, 5127903

D3: US, A, 6110193

The cited documents represent the general state of the art. The invention defined in claims 1-10 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed pacifier where the cartridge has a volume larger than the volume of the flow channel and is equipped with a cap at an insertion opening. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-10 is novel and is considered to involve an inventive step. The invention is industrially applicable.

New Patent Claims

Attorney's ref.: P2031PC00

Appln. No.: PCT/NO03/00053

1.

A pacifier for receiving a single use cartridge (2) containing flavoured substances that are to be ingested orally, comprising a base part (3) having a cartridge chamber (3d), a nipple (4), at least one flow channel (5) between the cartridge chamber (3d) and the nipple, and at least one hole (8) that is in communication with the flow channel (5) in the nipple (4), the flow channel (5) being at least formed in the nipple (4), c h a r a c t e r i s e d i n t h a t the flow channel has a minimum diameter of less than 1 mm, that the cartridge has a volume substantially larger than the volume of the flow channel, and that the base part (3) is equipped with a cap (1) at an insertion opening (3c) to the cartridge chamber (3d) for the cartridge (2).

2.

A pacifier according to claim 1, characterised in that the flow channel (5) extends along almost the entire length of the nipple (4).

3.

A pacifier according to claim 1 or 2, characterised in that several parallel flow channels (5b) are formed in the nipple (4).

4.

5.

A pacifier according to claim 1, 2 or 3, characterised in that a prechamber (5a) in the form of an enlargement of the flow channel (5) is formed at the hole/holes (8).

25

20

A pacifier according to claim 1, 3 or 4, characterised in that the cartridge chamber (3d) extends some way into the nipple (4).

30 **6**.

A pacifier according to one of the preceding claims, characterised in that the cap (1) is a hinged cap (1).

7.

A pacifier according to claim 6, characterised in that the cap (1) is equipped with an air inlet hole (9), preferably in connection with a hollow piercing means for piercing the cartridge (2).

8.

5

10

15

A cartridge for use in a pacifier according to claim 1, 2, 3 or 4, characterised in that it comprises a housing of a substantially rigid material and at the end thereof that is to be inserted into the pacifier is equipped with a pierceable sheet that is arranged to be pierced by suitable means in the pacifier in order to open communication between the interior of the cartridge and the channel (5).

9.

A cartridge according to claim 8, characterised in that it comprises a tear-off or pierceable sheet at an opening (2a) at the cartridge end opposite the insertion end.

10.

A cartridge according to claim 8 or 9, characterised in that the cartridge (2) has a portion (2c) that is designed to extend some way into the nipple (4).

20
